

Software Engineering II - Software Design Studio

Scrum Summary

Date: 9/15

Name: Christopher Hannou

What was planned (JIRA #1): Setup Database connectivity. The Start of the HTML coding for the website.

What was accomplished (JIRA #3): The documentation of the website was created. The Team had their role defined and the backend database service was chosen. We now have to figure out how the database will work and what will put on it.

Project Status

Action Plan: Find out what we will like to use the database for and how to connect it to the website. Also talk more about the team roles and responsibilities. Who is doing what and what our project is going to be about.
